

Tactical ballistic systems

Overview

Tactical ballistic system -17

The collars offers good protection

Detachable throat protection that can be folded down

Very large ballistic sleeves. They are attached on the vest and not around your arms to always cover the armpit. Pivoting attachments makes it possible to use your arms above your head.

Velcro attachment for ID markings with Velcro

Holder for up to 25x34 cm hard plates in the front

Pouches can be attached on the MOLLE webbing's on the front.

Internal belt that reduces the burden on the shoulders

Groin protection with MOLLE webbing's.

Clean inside to be as comfortable as possible and not to catch in your uniform when you put it on or take it off. Soft ridges are sewn on the inside to increase comfort and ventilation. Fabric, not mesh is used under the ridges to protect the ballistic panels.

Quick release buckles in the back will not mess with your shooting and still make it possible for the medic to remove the vest from you without cutting it into pieces.

Holder for up to 26,5x34 cm hard plates in the back

Velcro closure in the side. Closes back.

Squeeze ballistic system -17

Ballistic yoke with collar and throat protection in NIJIIIA. The throat protection can be removed. Easy to attach and remove.

Ballistic sleeves to protect the upper arms and the armpit in NIJIIIA. The sleeves are attached to the ballistic yoke or directly to the Squeeze. They move freely and will not restrict your arm movements.

Side panel pouches to protect your sides and hold the Squeeze together. A NIJIIIA panel can be carried in the side panel pouches. A 15L cm hard plate can also be carried in the side panel pouches.

The Crotch protection is attached in the front of the Squeeze. NIJIIIA protection. It is shaped to protect without restricting your leg movements. It can be hanging down or be connected between your legs with the elastic strap.

There are two different ways to close and tighten the system: Quick adjust or side panel pouches.

The side panel pouches have an elastic string in the back to sit flexible and tight on the body.

The Spoon sleeve is attached in the back of the Squeeze.

A Combat belt with a NIJIIIA panel.

Spoon garage to transfer the weight from the Squeeze to the hips.

The back Crotch protection is attached in the Combat belt. It can also be attached in the Squeeze.
